

Sustainability policy

Proton Group

For Proton Group, sustainability means that we take active responsibility for the impact our operations have on society. Being a sustainable company is fundamental to the long-term development of our operations and business. Our ambition is to develop solutions that contribute to a sustainable world for future generations.

Proton Group sees sustainable business as a social, ethical, environmental and economic responsibility where we in all our businesses work purposefully to live by our core values of being proactive, working as a team, challenging ourselves and collaborating. We transparently assess and report on our impact on society.

For us, sustainable business is synonymous with CSR, Corporate Social Responsibility.

We are PROACTIVE

We are responsible and proactively clear about our responsibility to promote gender equality, decent work and sustainable economic growth. In our companies, every individual should feel respected. Therefore, it goes without saying that we respect and comply with labor laws, environmental legislation, safety requirements and other international agreements and conventions such as the OECD Guidelines for Multinational Enterprises and the principles of the UN Global Compact.

We have TEAM SPIRIT

We are brave when it comes to standing and stand up together as a team for our core values. At Proton Group, we dare to challenge and question, see the truth and consistently act accordingly. We are honest, open and impartial in our relationships with business partners and have zero tolerance for behavior that overrides free competition.

We CHALLENGE

We are curious and constantly challenge existing ways of working, processes and technologies to find new opportunities for improvement in our operations. Innovation and technological progress are key to sustainable solutions for both the economy and the environment. By being creative and solution-focused, we want to try new ways, constantly learn new things and work smart and efficiently in all aspects.

We COOPERATE

We are committed to fighting climate change and its consequences. We work together both internally and externally to actively map our impact in the areas where we operate and to ensure the sustainable life cycle of the goods and services we deliver. Working to reduce energy consumption and use renewable energy sources is of great importance to us.
