

Environmental Policy

Our business will be characterized by a sustainable approach. We shall protect the resources in our surrounding world, which for us primarily means spreading knowledge and expertise about our testing services, with the aim of influencing our customers to develop and manufacture sustainable and profitable products.

We shall protect the resources in our surrounding world.

Through an active commitment and work to increase competence in corrosion testing and surface analysis, we will contribute to our customers developing and manufacturing sustainable and profitable products. Through active and long-term environmental work, we will reduce the risks of environmental impact.

Actively develop our business to reduce its impact on the environment.

We will develop our business so that it entails as little environmental impact as possible within an economic, technical and market reasonableness. The significant environmental aspects are found in energy, chemistry and waste.

The business must be characterized by continuous improvements.

The business is monitored and managed through current environmental laws and other requirements and shall constantly be evaluated and improved through systematic work together with employees, customers and suppliers.
